

## **We Are All In This Together**

If I understand correctly,  
the Multiverse is a theory  
in quantum physics.  
Multiple Universes is  
a theory in Cosmology.

There can be others like us.

Where are they        –the space we know  
is not expanding into space        –  
it is space/  
there is no space before        –it is expanded into

There is Nothing to expand into/

Treading the path that leads to the Sun,  
I look up and can't stop marveling.  
I see a ray of color in the immense warmth of light.  
It is a park, on this planet Earth,  
with trees oozing beauty and grace.  
yet oh so fragile.  
In the Trees, I discover myself.

In Satellite images        –the trees are disappearing.  
The Tree outside my window        –  
branches spreading        –a restplace  
for birds/  
and my thoughts.        –it is safe

It is not safe/

How fast are you moving when you are sitting still...
